

Cattle Quick App for Agriculture

Maximizing profits in the cattle industry is challenging. Often dairy farmers sell before reaching the highest potential margin. Cattle Quick App for iOS provides a five step process for your salespeople to help solve this problem. Your sales staff will work with farmers on site to visualize the stages of profit improvement throughout the cattle's lifespan. Each Cattle Quick evaluation is stored in the cloud, reusable as year-over-year template, and Cattle Quick provides a digital PDF of the plan to the farmer.

“Cattle Quick helped our farmers increase their profits by 11% in the first year.”

Cattle Quick App enables agriculture companies to:

- Have a sales staff that provides more value to cattle farmers
- Share a five step plan to increase profits in the cattle industry
- Create PDF proposals of each evaluation
- Integrate with existing CRM's
