

GreenPrint for Field Service

Making a great customer experience is what it takes to be the best in the home services industry. With GreenPrint for iPad, paper trails, lost photos, and hours of data entry become a thing of the past. GreenPrint make it easy to sketch anything, calculate square footage, and document trouble spots with codes and images. Customers love receiving the easy-to-understand paperwork in less time.

“Documentation at the site used to take 20 minutes for each appointment, and all the images came separately, and we were able to save 10 minutes on every call with GreenPrint”

“By replacing the paper documents with Evolve and GreenPrint, we are gaining over an hour per day on 400 field associates and all of the documentation is available real time.”

GreenPrint enables field associates to:

- Tap into historical data and view images from the last visit
- Create detailed grid maps of residential and commercial sites and save to the cloud
- Draw structures to scale and create proposals
- Place images on your drawings
