

Service Order for iOS

By combining Nexcom's Mobileview iOS software with Viewpoint Construction Software, customers transform their service organizations. Mobileview provides real time data collection, digitizes your forms and provides time sheet integration. The power of Mobileview is the integration with 'sites', equipment on site, and the ability to schedule service labor to new construction jobs and charge services correctly.

First-call completion Rates average 60% due to varying levels of field service professionals and lack of access to the right information.

First-Call Completion Rates

Mobileview enables service organizations who use Viewpoint to:

- Have all the historical information a service professional needs to complete the job
- Collect labor hours, travel time, and PTO and integrate the time sheets to Viewpoint
- Enhanced scheduling experience outside of Viewpoint
- Manage equipment at the location and add images
- Share information with customers using the Mobileview customer web portal
