

ProjectTrack for Construction

When you've committed to legacy construction software that has no integrated mobile solution, it can negatively affect all aspects of the construction management process. ProjectTrack manages all the field activity separately using iOS and the cloud. Project managers are enabled to schedule, manage time, and process change orders. ProjectTrack reduces safety exposure and costly fines.

Companies see a 24% decrease in compliance fines nine months after deployment of mobile construction management systems.

Margo Richards and James Adelle - How does the market respond to technology innovation?

ProjectTrack enables construction companies to:

- Manage daily logs, forms and images utilizing iOS
- Support a customer portal for job owners
- Help field personnel stay informed of their schedule and weekly time sheets
- Integrate with legacy construction softwares (Viewpoint, Microsoft, Sage, SAP)
