

# JobTrack for SAP

Delivering turnkey responsible energy solutions for retail and commercial facilities all over the U.S. requires precise execution. The logistical responsibilities are enormous. JobTrack for SAP brings together your field work force and your SAP software platform. JobTrack's flexible interface allows field technicians to complete new jobs as they occur, and when SAP creates the new work order, the completed work is synced with your SAP enterprise software.

*A report by IDC Energy Insights Q1Y2014 reveals approximately 50% of energy & utility employees are working as a mobile workforce*

Today's SAP users are stuck in a legacy software with an inferior mobile interface. JobTrack for SAP is a versatile mobile tool that's made to help companies to:

- Go paperless and schedule more efficiently
- Share real time KPI's using the JobTrack client portal
- View customer history from the iPad
- Close work orders faster without all the rekeying of data
