

ScheduleTrack for Home Builders

Staying on top of vendor schedules can be a struggle for a home builder, especially when those schedules are constantly changing. With ScheduleTrack for iOS, vendors and project managers can easily view and update all of the day's schedule exceptions, see who is scheduled, and get notifications as changes take pace. By replacing cumbersome paper trails with automated schedules, ScheduleTrack's intuitive interface and powerful analytics enable managers to navigate real-time schedule changes from their phone or iPad. Visibility and control has never been easier.

Schedules encompass hundreds of time-interdependent tasks per house. At any given time, a sub might be assigned to 200 tasks. It's a sure thing that that during his daily rounds, a super is going to tweak a subcontractor's schedule. Knowing that the status of one task may affect another. ScheduleTrack intuitively solves all of the scheduling problems .

ScheduleTrack enables homebuilders to:

- Distribute the latest build schedules, change requests, and issues on site - all on a single, intuitive dashboard
- Manage days under construction.
- Send schedule changes in just a few taps to vendors, and get alerts as they are accepted and declined.
